

Agave desmettiana 'Variegata'

VARIEGATED TROPICAL AGAVE

These are upright, vase to urn-shaped Agaves with virtually toothless leaf edges with sexy curving sword-shaped leaves. This desirable selection has green leaves with a ribbon of gold along their margins. These are coastal, tropical Agaves suitable as stand-alone xeric landscape features, but they blend and accent other tropical looking plants like Hibiscus, Bougainvillea, Canna lilies, and Tecoma sp. They can acclimate to full sun, but perform quite well in some shade or filtered light. Low maintenance and adaptability to many different design models makes them some of the easiest choices for designers.

DESCRIPTION	
	2-3 FT. x 2-4 FT.
	FULL TO PART SUN
	USDA ZONE 9-12
	NORTHERN NEW MEXICO
	YELLOW
	MODERATE TO LOW
	TO 25°F
