PLANT DETAILS

# Agave desmettiana

## TROPICAL AGAVE

These are upright, vase to urn-shaped Agaves with mostly smooth leaf edges and sexy, recurving sword-shaped leaves. They are green to glaucous color with a short, somewhat sharp terminal spine. These are coastal, tropical Agaves suitable as stand-alone xeric landscape features, but they blend and accent other tropical looking plants like Hibiscus, Bougainvillea, Canna lilies, and Tecoma sp. They can acclimate to full sun, but perform quite well in some shade or filtered light. Low maintenance and adaptability to many different design models makes them some of the easiest choices for designers.

### DESCRIPTION

 2-3 FT. x 2-4 FT.

 FULL TO PART SUN

 USDA ZONE 9-12

 NORTHERN NEW MEXICO

 YELLOW

 MODERATE TO LOW

 TO 25°F
