

# Agave titanota

## TITAN AGAVE / WHITE AGAVE

This Agave that hales from Oaxaca, Mexico is easily identified by its light blue-green leaf color and wide, white to brownish marginal teeth that often resemble the mouth of an angry shark. These teeth produce picturesque bud imprints on the leaf surfaces. They are smallish plants and solitary, making them good candidates for container culture or used as unassuming focal point specimens. Good drainage is a must and protection from hard frosts during winter is advisable. Many selections exist in the Agave collector trade, including ‘White Ice’, a more powdery blue color with black terminal spines and strong tooth imprints on the back leaf surface. ‘Black & Blue,’ a smaller, dramatic version with blue-green tightly formed rosettes, and leaf margins with wide, stunningly curved black teeth. And *Agave titanota* ‘fo76’, that has green, short squatty leaves with ghostly white large marginal teeth.

DESCRIPTION	
	1.5-2 FT. x 2-3 FT.
	FULL SUN
	USDA ZONE 7-11
	OAXACA, MEXICO
	YELLOW
	LOW
	TO 25°F
