PLANT DETAILS

# Agave weberi

SMOOTH EDGE AGAVE / WEBER'S AGAVE

This Agave is described as medium large, green to grayish, forming open arching rosettes with wide pliable, straight to recurving guttered leaves with smooth leaf edges, ending in a 1.5-2 in. terminal spine. This is all true information but these Agaves have way more majesty than this precise physical description indicates. Often, when plant aficionados come across an Agave weberi they are usually in awe from the sight of them. These are soft-leafed, gray-green plants with a pleasing urn shape. They are sculptural without looking deadly or overbearing despite their mature size. They make excellent container plants, landscape specimen plants or even blend into sophisticated tropical designs. Like other agaves, they demand well-drained soil, and they are free suckering, creating many pups around the base of the mother plant.

## DESCRIPTION

 4-6 FT. x 6-8 FT.
