PLANT DETAILS

Agave x 'Blue Glow'

'BLUE GLOW' AGAVE

This is a hybrid agave, between two other favorites, *Agave attenuata* and *A. ocahui*. Like all hybrids, the offspring display only the best qualities provided by both parents. This is a small, well-behaved Agave with flat to slightly cupped leaves that are silvery-blue green color and have a short reddish terminal spine. They form a nearly symmetrical round shape similar to *A. ocahui*. The leaf margins possess no teeth, they are thin, golden red in color with a spectacular translucence that allows the plant to literally glow when it is back-lit in the late afternoon or morning sun. Plant these beauties in masses, to accent hardscape elements, as individual specimens or in modern minimalistic containers, but site them where the sun will allow them to glow.

DESCRIPTION

 2-3 FT. x 2-3 FT.

 FULL SUN / PARTIAL SHADE

 USDA ZONE 9-12

 RANCHO SOLEDAD,
CALIFORNIA

 YELLOWISH GREEN

 LOW

 TO 25°F
