

# Acacia smallii

(Syn. Vachellia farnesiana)

## SWEET ACACIA

*Adaptable trees with unmatched fragrance.* Numerous sweet smelling golden puff-ball blooms occur in spring. They are small to medium sized fast growing trees, mostly evergreen with long white thorns. Some thinning is helpful but no topping. Maintaining a dense canopy protects trunks from sunscald. Trees are drought tolerant when mature, but regular deep watering is best through establishment. Trees have small, compound, dark green leaves against dark rough, somewhat shaggy bark. Flowers are followed by short, hard dark brown seed pods.

DESCRIPTION	
	15 FT. TO 30 FT.
	FULL SUN
	USDA ZONE 8-10
	NORTH AMERICA & MEXICO
	YELLOW
	LOW TO MODERATE
	TO 15°F
