

# Acacia willardiana

(Syn. Mariosousa willardiana)

## PALO BLANCO

*A striking white stick!* Palo Blanco translates to “white stick”. These trees are prized for their peeling bark the reveals their bright white trunks. A pendulous, evergreen tree for small spaces. They offer landscape drama when designed in groves or as simple accent specimens. Their leaflets are long, green, and stringy with occasional small compound leaves attached which provides additional textural interest. They are low water use and low maintenance. Staking immature trees can be beneficial until they develop a strong securing root system. Spring produced flowers are cream colored catkins, pods that follow are papery light brown. Do plant them in well-drained soils.
