PLANT DETAILS

Bouteloua gracilis

'GILA SILVER' BLUE GRAMA GRASS

A superior heat tolerant grama grass. 'Gila Silver' is a low-desert native shortgrass prairie selection. Unlike other popular selections that are from a northern provenance, this is a small clumping grass is way better adapted to our low desert landscapes. Although they are small in size these well-behaved grasses are big in personality. Thin blue-green leaves form small clumps with numerous nude stalks rising above the foliage in summer that hold cute eyebrow-shaped seed heads that eventually curl into nearly perfect little circles as they mature. 'Gila Silver' is as well-suited to large reclamation projects or roadway stabilization as they are for small urban home landscapes.

DESCRIPTION
