# Chamaerops humilis

## MEDITERRANEAN FAN PALM

Handsome, multi-trunked tropical palms. These are slow to moderate growing, multi-trunked palms used for landscape specimens or filler. They are clean plants with a refined appearance. In optimal conditions, you can expect a growth rate of about 1 ft. per year. Bold accent palms work well around pools, water features, patios, large, raised planters, or planted en masse for background. Immature plants produce dark green palmate leaves all the way to the ground with straight, sharp spines along leaf petioles. They accept high heat, and they are one of the most cold hardy palms for southwestern gardens tolerating temperatures down to single digits. As most palms do, these prefer moderate to ample water in well-drained soils.
