PLANT DETAILS

Citrus spp. 'Lisbon' Lemon - Semi-Dwarf

'LISBON' LEMON

'Lisbon' lemon is the true lemon lovers lemon! Smallish, bright yellow fruits are juicy and tart. Trees are vigorous, a bit thorny but they are more cold hardy than other types of true lemons and they thrive in low desert heat making them a great choice for any edible garden in the valley, or southern CA low desert regions.

All varieties of edible Citrus make lovely ornamental landscape trees for the low desert. They all have deep green, glossy leaves, unique, sturdy branching structure, with attractive, sweetly fragranced white blooms primarily from February through March. Contrary to common belief, they are relatively low maintenance once established and they are long-lived, moderate growers. All edible Citrus spp. are grafted onto size-determining rootstocks. While the fruit is not affected, Standard rootstocks allow trees to reach 25-30 ft. high & wide at maturity and Semi-dwarf rootstock trees grow 30-50% the size of a Standard tree. Provide citrus trees with well-drained soil, regular deep watering, especially during the growing season, and annual spring feedings with a balanced and complete fertilizer.
