PLANT DETAILS

Citrus spp. 'Sanguinelli' Blood Orange - Semi-Dwarf

'SANGUINELLI' BLOOD ORANGE

This selection of Blood Orange is a strong upright growing tree, virtually spineless, and very productive. 'Sanguinelli' flesh as well as the rind has a deep purple to intense red coloration, which contributes to the attractiveness of these fruits. They are as good to look at as they are to taste! Fruits are mostly seedless. Please note, since these trees can produce prolifically some early fruit thinning can be beneficial to help the remaining fruits to grow a bit larger.

All varieties of Citrus make lovely ornamental landscape trees for the low desert. They all have deep green, glossy leaves, unique, sturdy branching structure, with attractive, sweetly fragrant white blooms primarily from February through March. Contrary to common belief, they are relatively low maintenance once established and they are long-lived, moderate growers. All edible Citrus spp. are grafted onto size-determining rootstocks. While the fruit is not affected, Standard rootstocks allow trees to reach 25-30 ft. high & wide at maturity and Semi-dwarf rootstock trees grow 30-50% the size of a Standard tree. Provide citrus trees with well-drained soil, regular deep watering, especially during the growing season, and annual spring feedings with a balanced and complete fertilizer.
