

Dalbergia sissoo

INDIAN ROSEWOOD, OR SISSOO

Quaking Aspen-like shade tree for the desert. These are fast growing semi-evergreen trees with bright green, round leaves that are almost constantly quivering. White to light gray colored bark provides additional visual appeal, these trees will develop quickly to form a large, dome-shaped shade tree. Primarily used in urban landscapes. Due to their extensively spreading root system Indian Rosewood do not perform well in spaces with narrow or shallow soil profiles such as parking lots or narrow streetscapes. Inconspicuous spring flowers will yield numerous small, papery seed pods that may require clean up maintenance. As trees mature, they will become more drought tolerant. Too much water will lead to faster growing trees with weaker root systems that are prone to toppling and requiring longer staking.

DESCRIPTION	
	UP TO 60 FT. X 40-50 FT.
	FULL SUN
	USDA ZONE 9-11
	INDIA
	YELLOW/GREEN
	MODERATE TO LOW
	TO 25°F
