PLANT DETAILS

Dalea greggii

TRAILING INDIGO

Silver foliage, purple flowering subshrub. As a young container plant, they may be diminutive looking, but they grow at a steady, moderate rate to become durable, resilient landscape behemoths. Given optimal conditions and care, *Dalea greggii* can grow to be 10 ft. across and 3-4 ft. tall, which is way out of size for most urban-sized landscapes. While some pruning can help control their size, landscapers should recognize that more pruning leads to more woody, misshapen plants with little to no flowers. Like all *Dalea* sp. they require well-drained soil. Initial supplemental watering is necessary to get them established, but growth on mature plants can be slowed by reducing the amount of water they receive. Utilize annual, selective thinning in early spring to help control their shape and size when necessary.

DESCRIPTION

 UP TO 3 FT. x 10-15 FT.

 FULL SUN

 USDA ZONE 8-11

 TEXAS AND MEXICO

 LAVENDER

 LOW

 TO 15°F
