PLANT DETAILS

Euphorbia ingens

LUCKY CACTUS, CANDELABRA TREE

This Euphorbia is one of the most popular varieties due to its relatively easy care, its physical structure, and adaptability to indoor culture. They grow fairly rapidly to form a tight, vertical but candelabra-shaped tree. They have small, paired thorns along the 4 winged, bright green arms. Near the top of each column, they will bloom along the rib edges with waxy yellow flowers surrounded by greenish colored bracts. Plant them in large containers for patio or interior plants for bright light situations or protected, frost-free patio areas with filtered sunlight. Use well-drained soil or potting mix and water only during warm, growth months.
