PLANT DETAILS

# Euphorbia tirucalli 'Sticks on Fire'

**FIRESTICKS, STICKS ON FIRE**

This spineless, shrubby plant is comprised of multiple vertical growing, thin cylindrical stems. In habitat, during mid-spring into summer, they produce waxy-looking pink to cream colored blooms along the top third of each stem. They are tough, native Chihuahuan plants that inhabit mixed desert scrub grasslands, and they tolerate heat, drought and some neglect. With some supplemental irrigation they can bloom sporadically during warmest months of the year, but they do require well-drained soils like most native succulents.

## DESCRIPTION

 4-8 FT. HIGH X 3-5 FT. WIDE

 FULL TO PART SUN

 9-11
