

Ferocactus glaucescens

BLUE BARREL

These Blue Barrel cacti are among the most eye-catching varieties suitable for native landscape designs, containers, rockeries, or mixed succulent gardens. They have a pleasingly round shape, bright powdery-blue waxy flesh with 1 in long, golden colored spines running down numerous ribs. With their refined, tidy attractive appearance they are effectively used for minimalistic modern mass plantings. Low maintenance and bright yellow funnel-formed flowers topping these barrels from spring into summer make them an irresistible option for savvy landscape designers.
