

Hesperaloe parviflora 'Yellow'

YELLOW HESPERALOE, YELLOW YUCCA

Just like Red Yucca, but with light yellow blooms. Easy-to-grow, tough, drought tolerant succulent accent plants. Long, inward curving gray-green leaves arch out from a central core, some with marginal filaments. In general, yellow flowering yuccas tend to have a smaller stature than most red yucca plants do, but due to lots of variability there are exceptions. Starting in spring to summer yellow bloom stalks form from the center of the plant rising above the foliage to make a bold and colorful display. Low water requirements and bloom stalks should be cut off well below the foliage once they have fully dried. **DO NOT** shear Hesperaloe foliage.

DESCRIPTION	
	UP TO 3 FT. x 3 FT.
	FULL SUN
	USDA ZONE 8-11
	TEXAS AND MEXICO
	YELLOW
	LOW
	TO 15°F
