PLANT DETAILS

Jacaranda mimosifolia

JACARANDA

Striking blue flowers with graceful foliage. These fast growing large, tropical trees make a perfect statement or accent tree due to their overwhelming spring to summer flower display. They have an open irregular habit with an oval shape typically growing taller than wide. Leaves are long, bi-pinnately compound with a lacy look and bright green in color. Deep blue, large tubular flowers grow in vertical clusters that stand tall above the foliage that is semi-deciduous even in low deserts. Unique, round dark brown seed pods follow the flowers, but they are not a terrible nuisance and easy to rake up. These tropical trees appreciate deep, monthly watering in summer and well-drained soils. Shallow frequent watering encourages shallow roots.
