PLANT DETAILS

# Leucophyllum frutescens 'Green Cloud'

**GREEN CLOUD TEXAS SAGE**

Soft green leaves with purple blooms. This selection of Texas Sage is unique for its darker green leaves. When conditions are optimal, masses of purple to wine-colored flowers appear during summer monsoon season. They are large, fast growing upright shrubs. While this selection accepts shearing, doing so will limit its blooming potential. Their size and dense growth do lend them to be utilized for a low water, evergreen screen or privacy hedge. They are most commonly used as foundational shrubs for virtually all residential and commercial landscapes.
