

# Leucophyllum zygophyllum

## UPRIGHT BLUE RANGER

Fuzzy gray-green cupped leaves with dark purple blooms. This plant starts cute and compact but has no interest staying small in urban landscapes with regular supplemental irrigation. The largest one we've ever seen was about 6 ft. tall and had spread about 10 ft. across. They will stay compact and grow at an average rate to a modest 4-5 ft. with infrequent, but deep summer watering. Its flowers are dark purple, which stand out well against the gray-green foliage. They can be kept smaller by shearing where needed, but that should be done after flowering in late summer. Like other gray leafed Texas Sage, they must have well-draining soils.
