PLANT DETAILS

Myoporum parvifolium

MYOPORUM

Bright evergreen utilitarian groundcover. Historically popular, evergreen groundcover, with short bright green leaves, along sprawling herbaceous stems. Plants can spread wide, but stay low, so they work well for slopes, retention areas, golf courses, parks, and other municipal projects with little to no foot traffic. Small, white star-shaped flowers appear along the outer or upper stems in spring. Flowers have a light fragrance and popular with bees and other pollinators. Myoporum are sensitive to root or stem fungal diseases when grown in poorly drained soils. They can thrive in low desert heat, but too much water or wet soil can cause quick decline. Shallow frequent watering in summer works well with evergreen Mediterranean-like groundcovers.
