

# Opuntia microdasys

## BUNNY EARS PRICKLY PEAR

Bunny Ear prickly pears are available in numerous versions due to various colored glochids. *O. microdasys* ‘Albaspina’ have white polka-dot glochids and some selections have cinnamon or golden colored glochids. The *O. microdasys* v. *pallida forma-crista* have golden glochids with wildly undulated green pads. Most have small oval to oblong shaped pads that form small, shrubby and spreading plants. As mentioned, they possess no long spines only fuzzy-looking, well-spaced glochids. Moderate to low water use in well-drained soils. They can be used in combination or as mass plantings of similar colored types.
