PLANT DETAILS

Pyracantha fortuneana 'Graberi'

FIRETHORN PYRACANTHA

White flowers, bright orange berries and dark green leaves. These tough woody perennials have many uses in landscapes including being used as impenetrable screens due to their sharp protective spines. They can be trellised or trained as flat growing espaliers, or as sheared hedges or free standing specimens. Clustered white blooms appear in spring that give way to spectacularly colored bright orange berries that hang against the dark green leaves until hungry birds come to chomp them off. Trim as needed late in the summer or fall. Moderate to ample water in well-drained soil will get young plants off to a good start, but they become more drought tolerant as they mature.
