

Yucca faxoniana

(Syn. *Yucca carnerosana*)

FAXON YUCCA

Giant, evergreen durable yucca. These giant-sized, arborescent yuccas offer long-term striking silhouettes for southwestern landscapes. Give them root to grow and space them accordingly. They can be dynamic, and bold accents when grouped together, or pair them with other softer desert adaptable shrubs. They produce long, dark green sword-like leaves to nearly 3 ft. and 2-3 inches wide at their base with a strong wicked terminal spine from wide woody trunks. They are typically single headed, from which comes a 3-4 ft. tall flower stalk in late spring that holds clusters of white, bell shaped blooms. They prefer good drainage and regular deep watering, especially in spring to summer with little to no supplemental water needed during fall and winter. Easy and adaptable Yuccas.
