

# Beaucarnea Recurvata

## PONYTAIL PALM

These succulent tropical plants are not palms, despite their common name, but are related more closely to *Nolina* spp. They are slow-growing, arborescent plants that develop a large woody caudex, the bulbous area between roots and stem, from which grows a tall trunk that holds numerous long, green strap-like leaves that hang down. Ornamental, long-lived, and adaptable they can live root-bound in containers for years, which makes them suitable to grow across the world as indoor plants. In frost-free environments, they can make attractive, low water, and low maintenance accent plants. Excellent drainage is a must, applying water during warm months only, making sure to avoid wetting the caudex.

DESCRIPTION	
	6-15 FT. x 4-6 FT.
	FULL/PARTIAL SUN
	USDA ZONE 9-11
	MEXICO
	WHITE/YELLOW
	LOW
	TO 20°F
