PLANT DETAILS

Penstemon Parryi

PARRY'S PENSTEMON

These strongly vertical pink flowered perennial accent plants can create a stunning visual display. These floriferous low desert spring ephemerals are extremely reliable, with a persistent reseeding habit. Narrow succulent-like gray-green leaves form in a basal mound, then starting in late winter to early spring, vertical bloom stalks shoot straight up that are covered with bright, bubble gum pink tubular blooms that hummingbirds adore. They occur naturally in Arizona to New Mexico in elevations around 1500 ft. to 4000 ft. After blooming, flower stalks can be removed before seed capsules ripen or allow them to brown and dry to cast copious amounts of seed for new plants to sprout the following year.

DESCRIPTION	
	3-4 FT. x 2-3 FT.
	FULL SUN
	USDA ZONE 8-11
	NORTH AMERICA
	RED/HOT PINK
	LOW
	TO 15°F
