PLANT DETAILS

Malus spp. 'Anna' Apple

'ANNA' APPLE

'Anna' apple, like other apples require two different cultivars to produce fruit through proper cross-pollination. As a flowering ornamental tree, they are attractive and fairly sturdy trees. Although they are not considered drought tolerant, they do not mind low desert heat as long as they are watered well, especially during the summer months from May through September. All apple trees require chill hours to bear fruit, this cultivar, developed in Israel, has a low enough chill hour requirement to produce fruit in mild winter areas such as Phoenix or CA desert regions. The fruits are good for fresh eating, sauce or baking, which makes this apple highly appealing.

DESCRIPTION

 15-20 FT. X 10-15 FT.

 FULL SUN

 USDA ZONE 6-9

 ISRAEL

 WHITE TO PINK

 MODERATE TO HIGH

 TO -10°F
